

ABSTRACT:

A system (1) for simulating a data communication between a read/write station and a portable data carrier comprises representation means for presenting a read/write station while the representation means are formed by station simulation means (2) for simulating the behavior of a read/write station arranged for a contactless data communication, which system 5 (1) further includes data carrier simulation means (4) for simulating the behavior of a data carrier, while the data carrier simulation means (4) are arranged for simulating the behavior of a data carrier arranged for a contactless data communication, and which system (1) further includes transmission means (6) for transmitting data (D) between the station simulation means (2) and the data carrier simulation means (4).
